

The CROSSINGS

SUSTAINABLE WINEMAKING

The Key To Our Success

+ OUR MISSION

At The Crossings, our aim is to produce fruit of intense varietal character and superb quality – with a low impact on the environment.

How do we do it?

We make it our mission to do things a little differently.

We...

Minimize

Minimum use of artificial input lessens stress on the environment.

Sheep in the vineyards reduce the need for weed spraying and mowing, encouraging nutrient recycling and aiding soil health.

Multifunction

We multifunction wherever possible to maximize efficiencies.

We eliminate the need for thousands of gallons of diesel every year in our Awatere vineyards; double row trimmers considerably lessen the number of tractor passes per season.

Manage

We actively promote the sustainable management of our natural and physical resources and are committed to preserving air, water, soil and ecosystems within our environment; this includes management of soil health and nutrition, resources, water availability and use, as well as pest and disease management.

All of our vineyards are managed and operated in accordance with the guidelines of Sustainable Winegrowing New Zealand.

+ THE RESULT?

Healthier Vines.

More Flourishing Fruit.

The Finest of Wines.

But don't just take our word for it...

The Crossings is proud to be an accredited member of Sustainable Winegrowing New Zealand - an organization that recognizes the preserving of natural and physical resources.

**INTENSE VARIETAL CHARACTER
WITH A DELICATE FOOTPRINT**
